

# **The Case for Home Energy Efficiency Measures**

---

**BASEA**

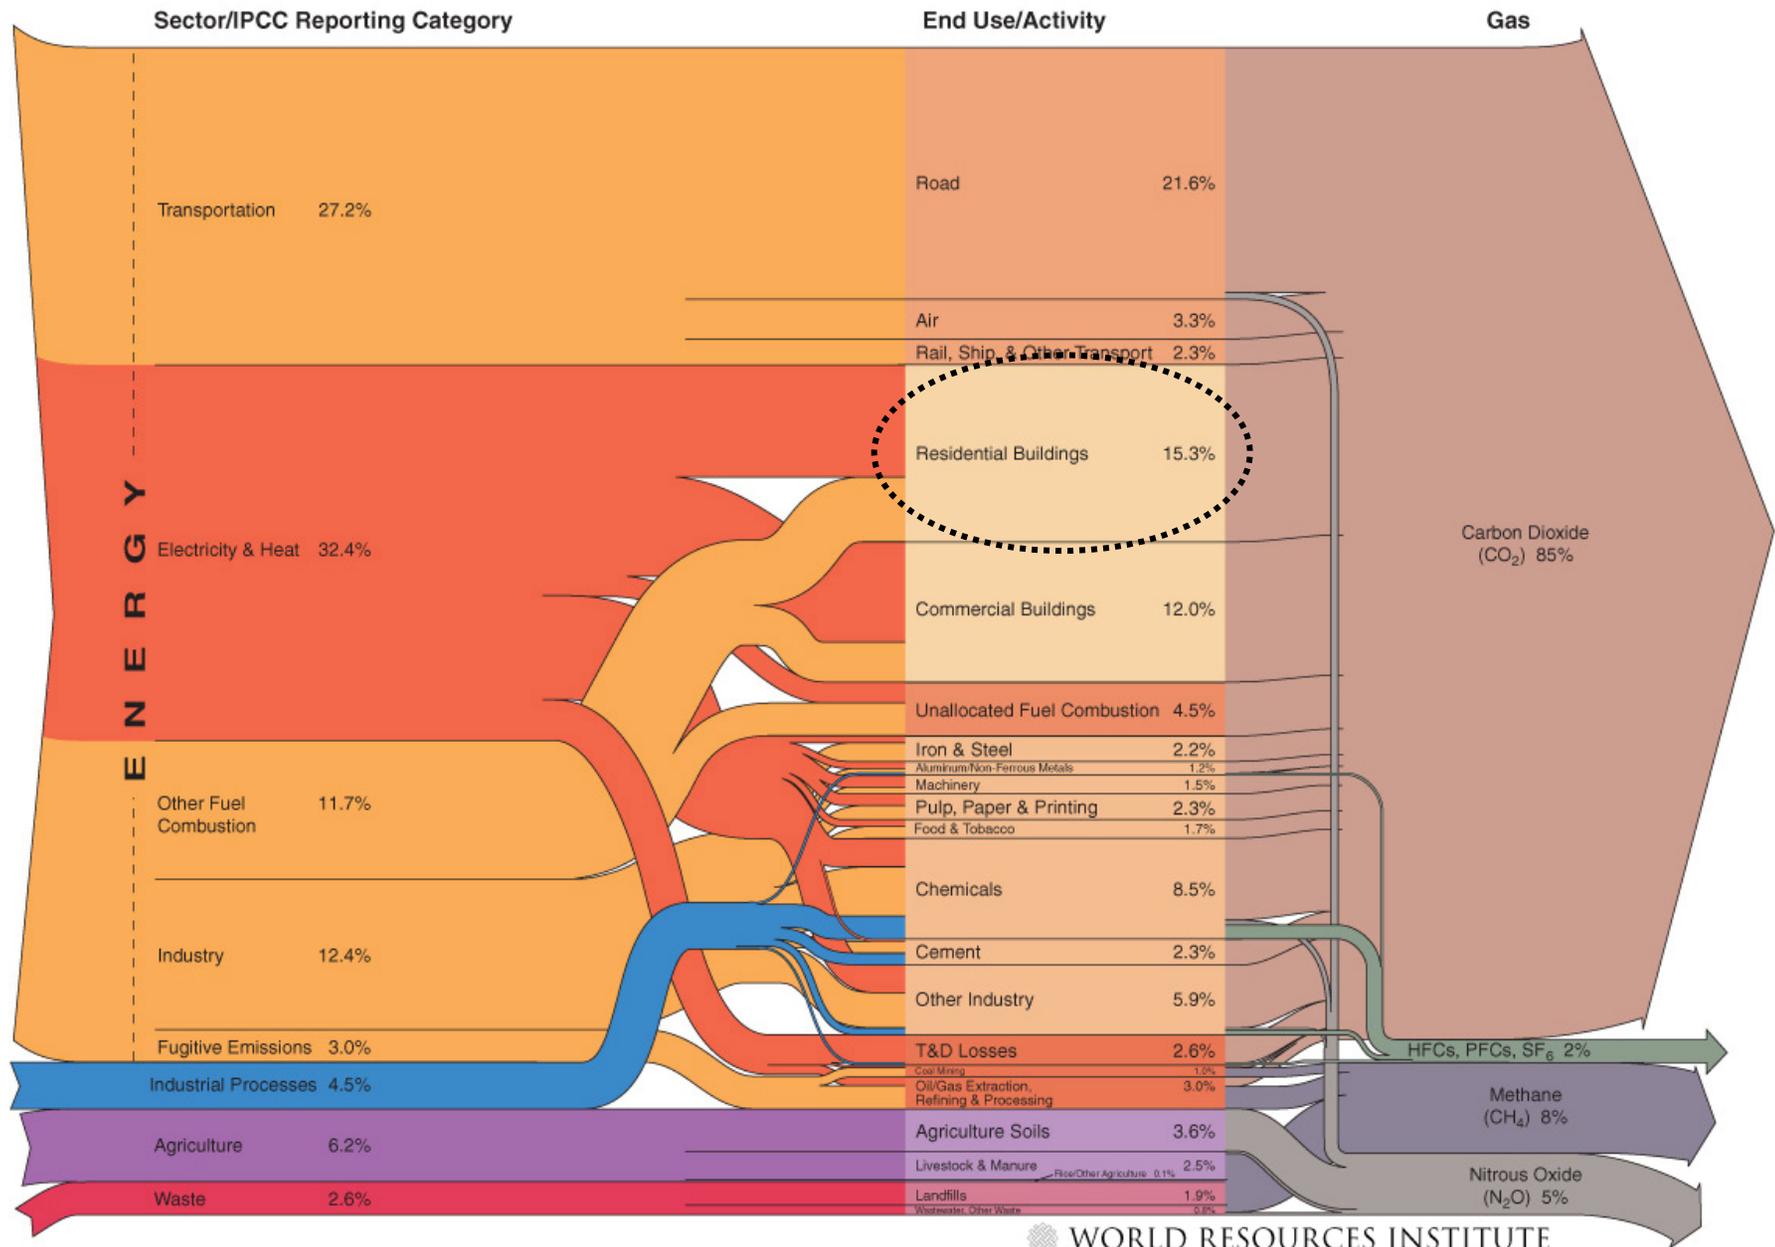

# Proposed topics for this discussion

- **Macro view: Why saving energy in households is important**
- **Micro view: How saving energy can help you**
- **Why aren't more homeowners doing this?**
- **What Energy Efficiency companies need to do...now**

Are there other topics you would like to hear about?

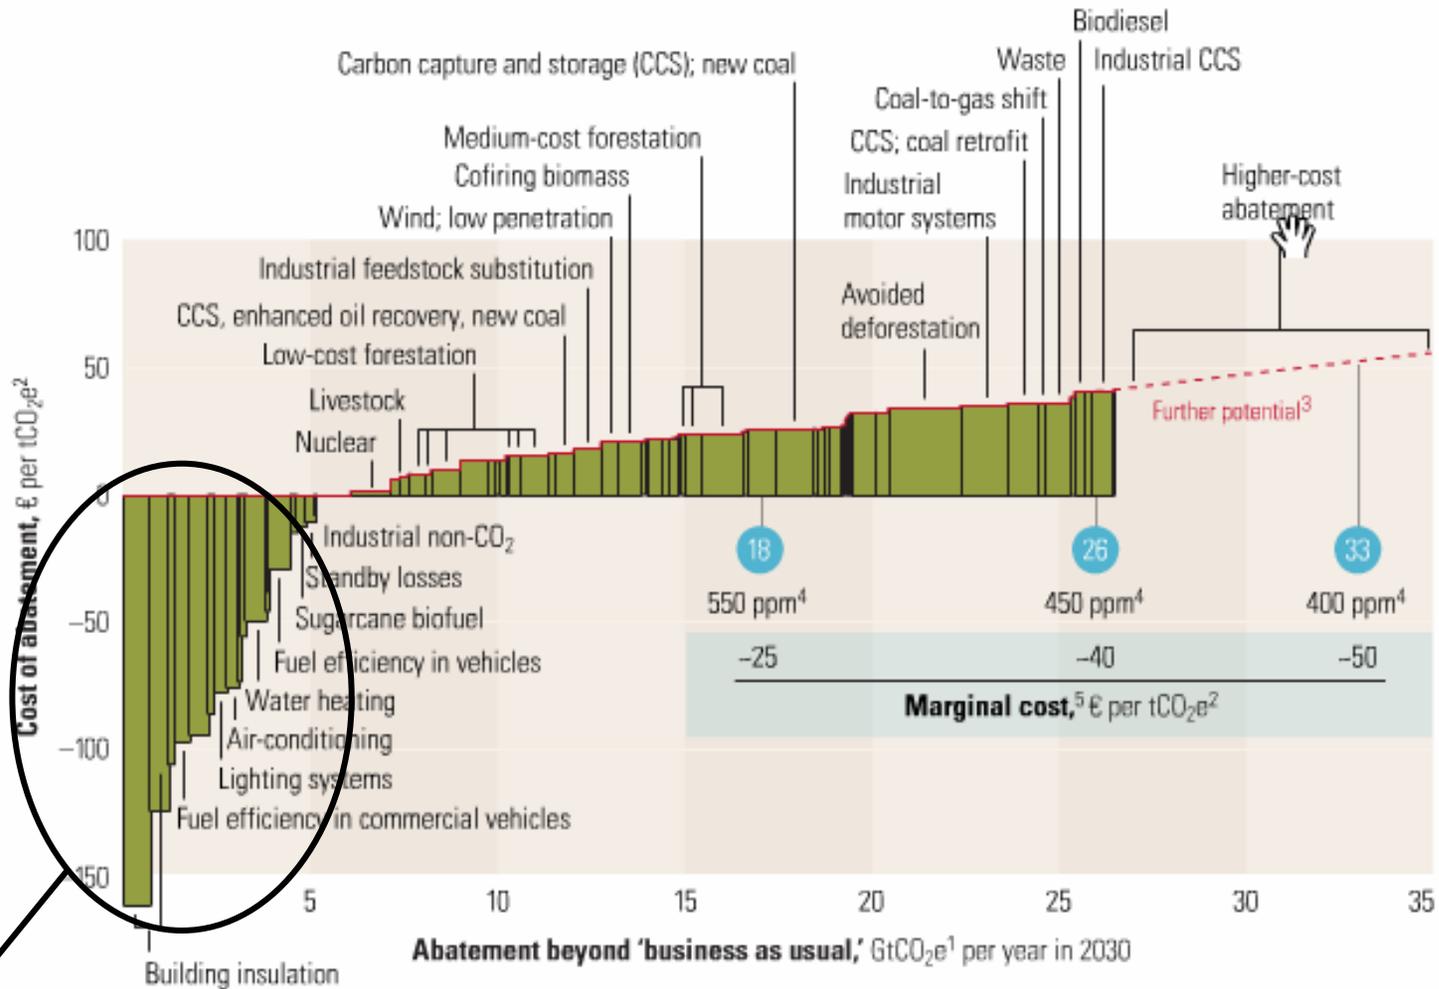

# Macro view: Residential buildings account for 15.3% of greenhouse gases

U.S. GHG emissions flow chart

# McKinsey identified energy efficiency as a significant savings opportunity

## What might it cost?

Efficiency investments

# Some quotes from leading media sources on the benefits of home energy efficiency

*“Obviously, game-changing technologies will...be essential to achieving the reductions in greenhouse gas emissions...But as it frames its strategy to deal with both problems, the Obama administration **cannot overlook the low-hanging fruit** — the gains to be had from making existing technologies more **efficient...most of the carbon abatement needed between now and 2030 could be achieved with existing technologies, things like **insulating homes**, improving fuel efficiency...***

New York Times, “Energy inefficient” January 18, 2009

*“Correct those [air leak] flaws, and **heating and cooling costs are typically cut by 20 percent to 30 percent, a saving of more than \$1,000 annually in some households**. In addition, carbon dioxide emissions and the strain on the national electric and gas systems are reduced.*

New York Times, “Focus on Weatherization Is Shift on Energy Costs” December 29, 2008

*“Whereas the burning of fossil fuels releases greenhouse gases, which contribute to global warming, and nuclear plants generate life-threatening waste, **the only by-product of energy efficiency is wealth, in the form of lower fuel bills and less spending on power stations, pipelines and so forth...***

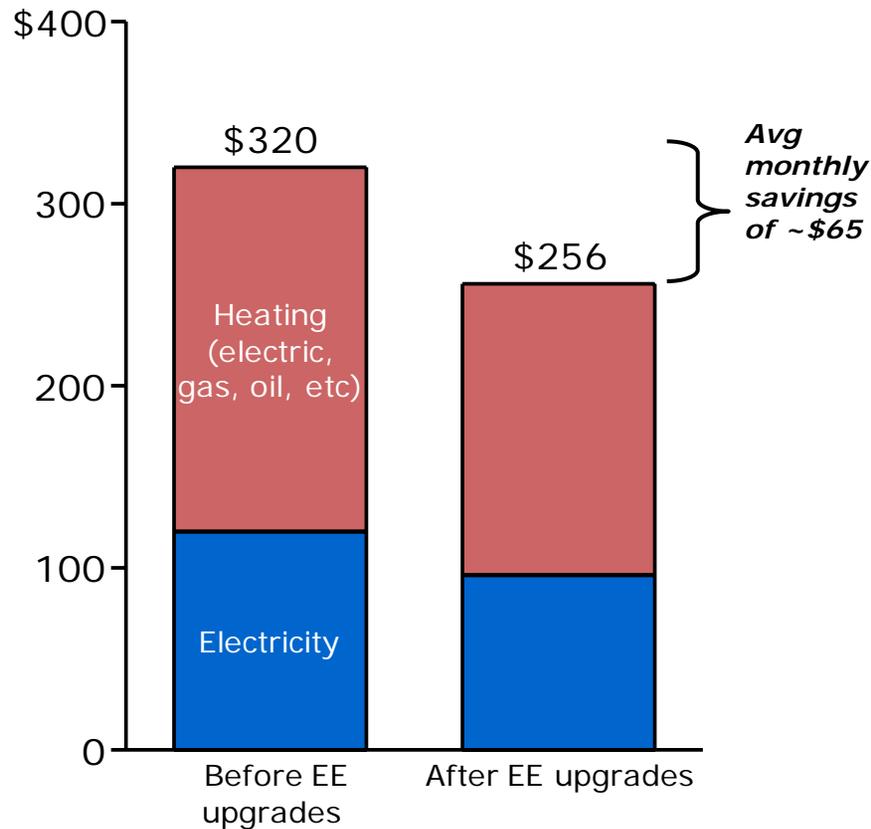

The Economist, “The elusive negawatt” May 8, 2008

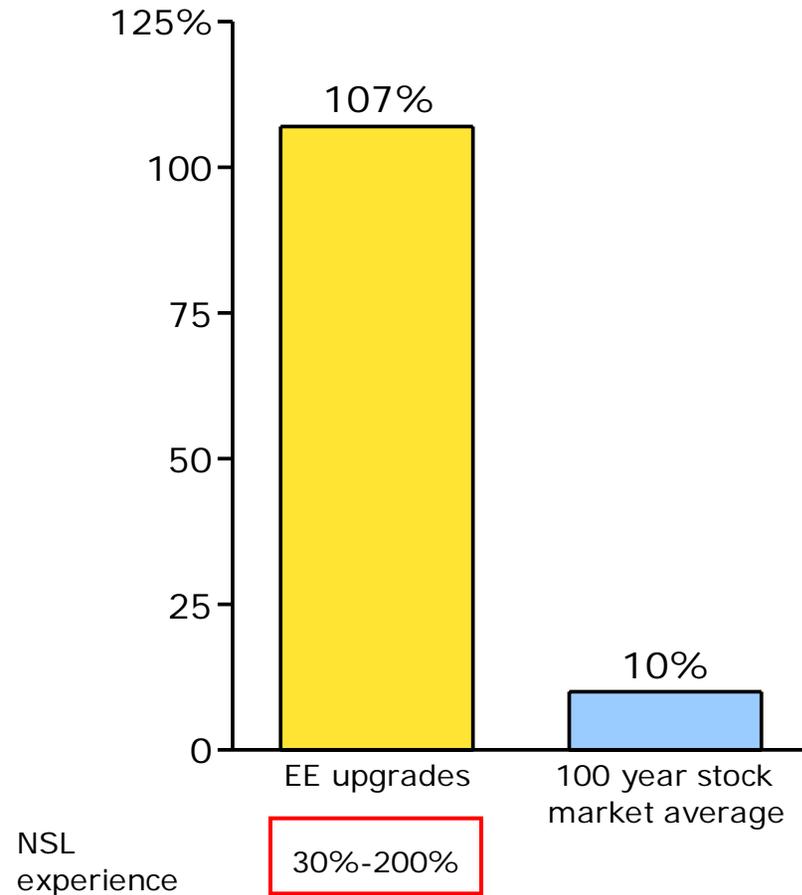

# Micro view: How much can individual homeowners benefit from energy efficiency?

**ILLUSTRATIVE**

Example monthly energy bill (all energy sources)

Average annual return on investment over 5 year period

# So if Energy Efficiency upgrades are such a home run, why don't more people do them?

- **Many people don't realize their homes are inefficient**

- The costs of excess energy usage are mostly invisible
  - e.g. air conditioned air leaking out of homes
- We all may have an idea about what our monthly energy usage should be (based on previous houses), not knowing that nearly all houses in the US are inefficient
  - Homes are built with an eye towards costs and deadlines, not efficiency
- We think mainly of transportation when we try to figure out ways to cut our footprint

- **Even those who realize their homes are inefficient may find it difficult to act**

- Each house has a unique footprint with specific savings opportunities
- Identifying the highest impact changes takes specialized training and equipment
- Once the right changes are identified, it can be burdensome to enact solutions
- Overall savings are either unclear or not seen as worth their efforts

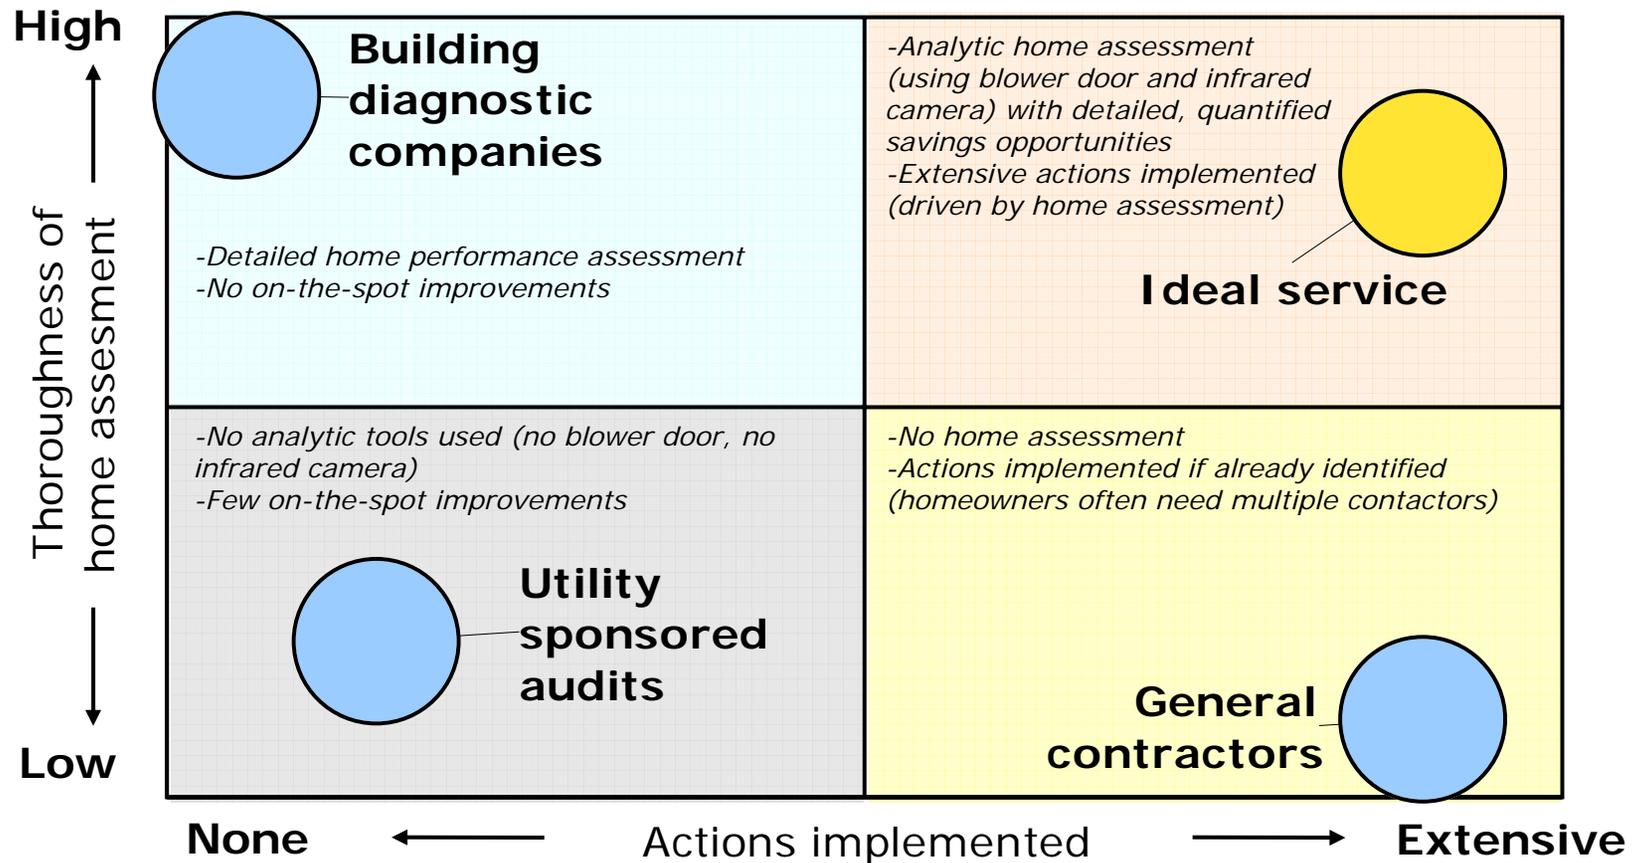

**Chances are...your home is inefficient. Now what?**

**next step living**

The **EASY** solution for savings, comfort & conservation

# Market landscape needs to evolve—EE companies need to become data-driven and action-oriented

# In other words, EE companies have to make it easy for you through a simple step-by-step process

1

## Diagnose

- Review with customer a survey completed prior to visit that outlines current energy usage behavior and needs
- Conduct an analytical and rigorous assessment of the home laying out prioritized changes needed

2

## Create customized plan

- Show consumer clear menu options of savings measures and estimated savings over time:
  - Immediate efficiency upgrades (e.g. door sealing and weather stripping, hot water pipe insulation, CFL replacement, etc.)
  - Longer payback efficiency options identified in the assessment (e.g. attic insulation upgrades, air circulation fan installation, appliance upgrades)
  - Behavior changes (e.g. turn off lights when not in a room; automatic sleep mode for computers)

Measure	Year(s)	Completed	Priority	Annual cost	Payback	Estimated savings
Level 1 measures with annual savings						
Level 1 Measure	Year(s)	Completed	Priority	Annual cost	Payback	Estimated savings
Level 1 Measure	Year(s)	Completed	Priority	Annual cost	Payback	Estimated savings

3

## Execute upgrades

- Immediately implement efficiency (Level 1) upgrades in the home that day
- Provide level II attic air sealing and insulation for those who choose this service

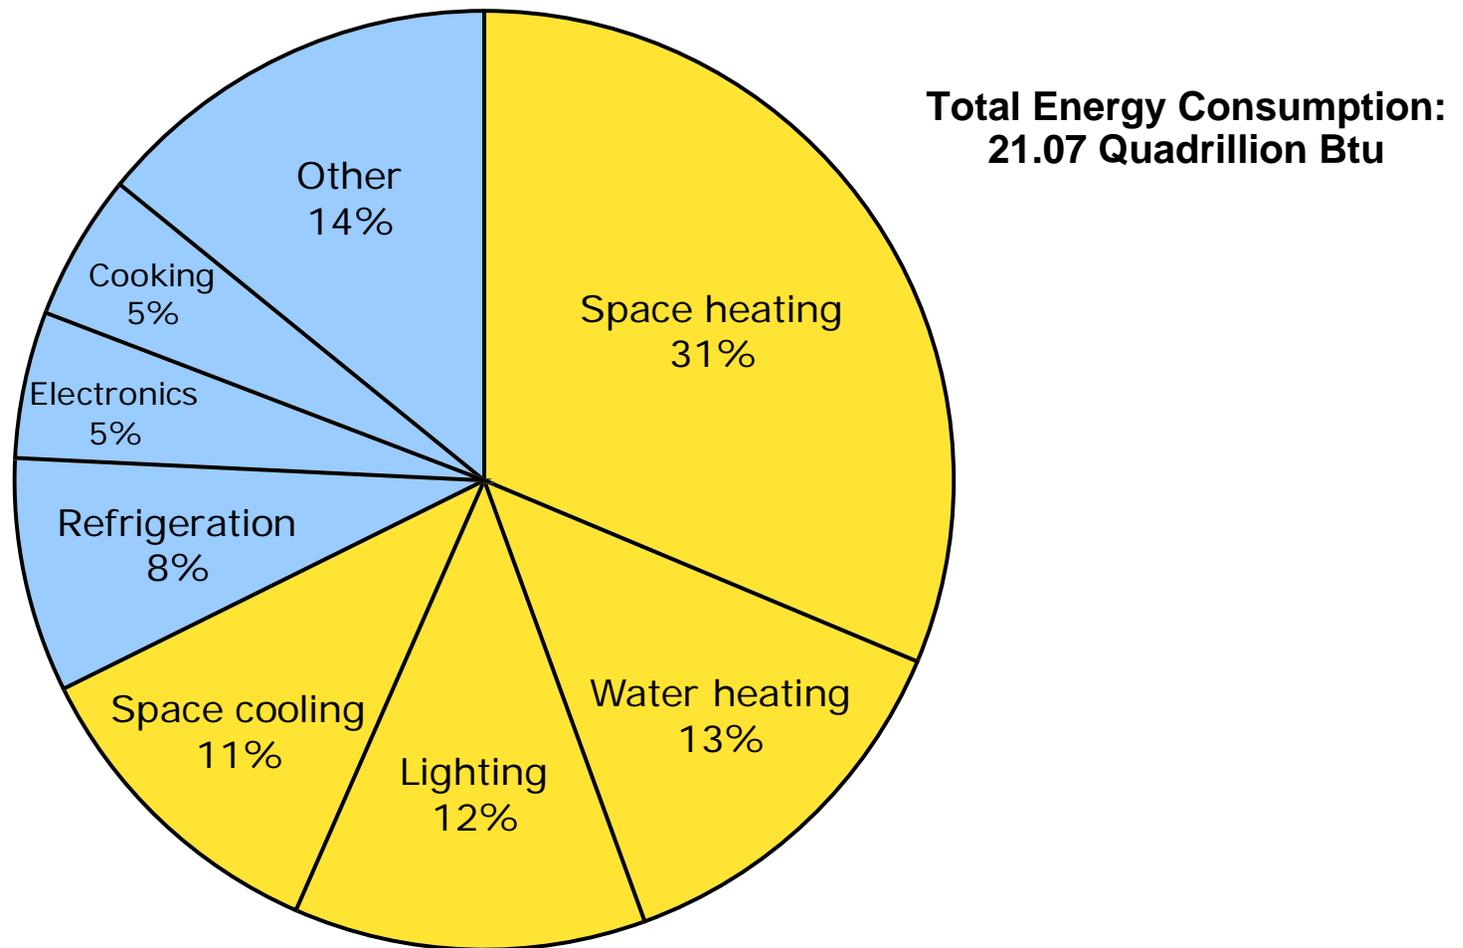

4

## Follow-up

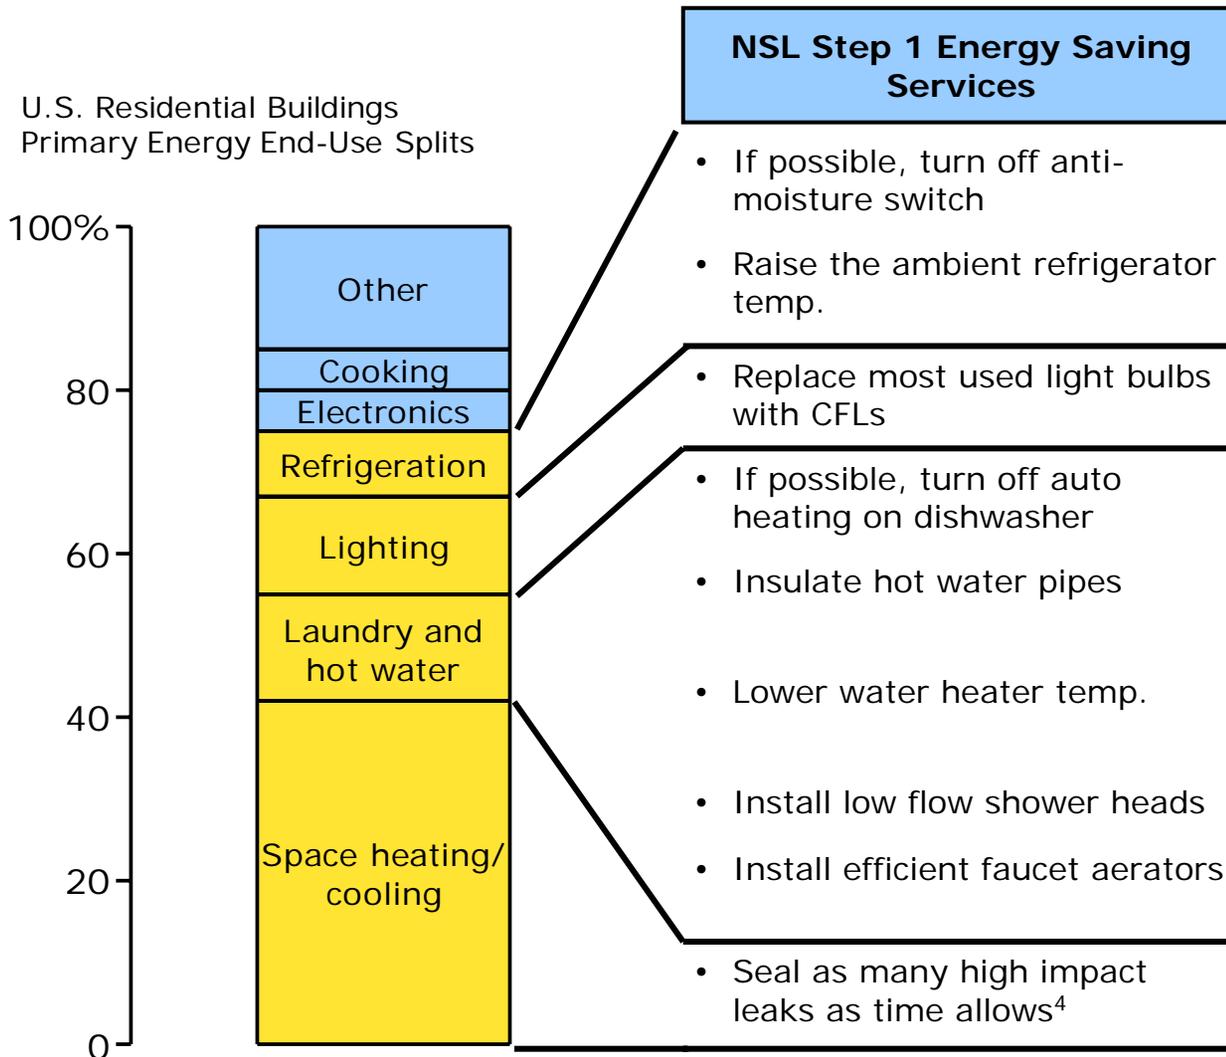

- Calculate and track energy /carbon savings
- Provide customer updates about new upgrades applicable to their home
- Provide recommended contractors for larger jobs

# EE company services should target main drivers of home energy usage

## U.S. Residential Buildings Primary Energy End-Use Splits, 2004

# Our service does this, and we hope others will soon follow

***Step 1 measures should result in 10-20% annual savings***

# Just as critically, EE companies need to track data to ensure that customers are saving

## NSL customer energy tracking software

Sample customer electricity usage before and after NSL Step 1 service, in kwh

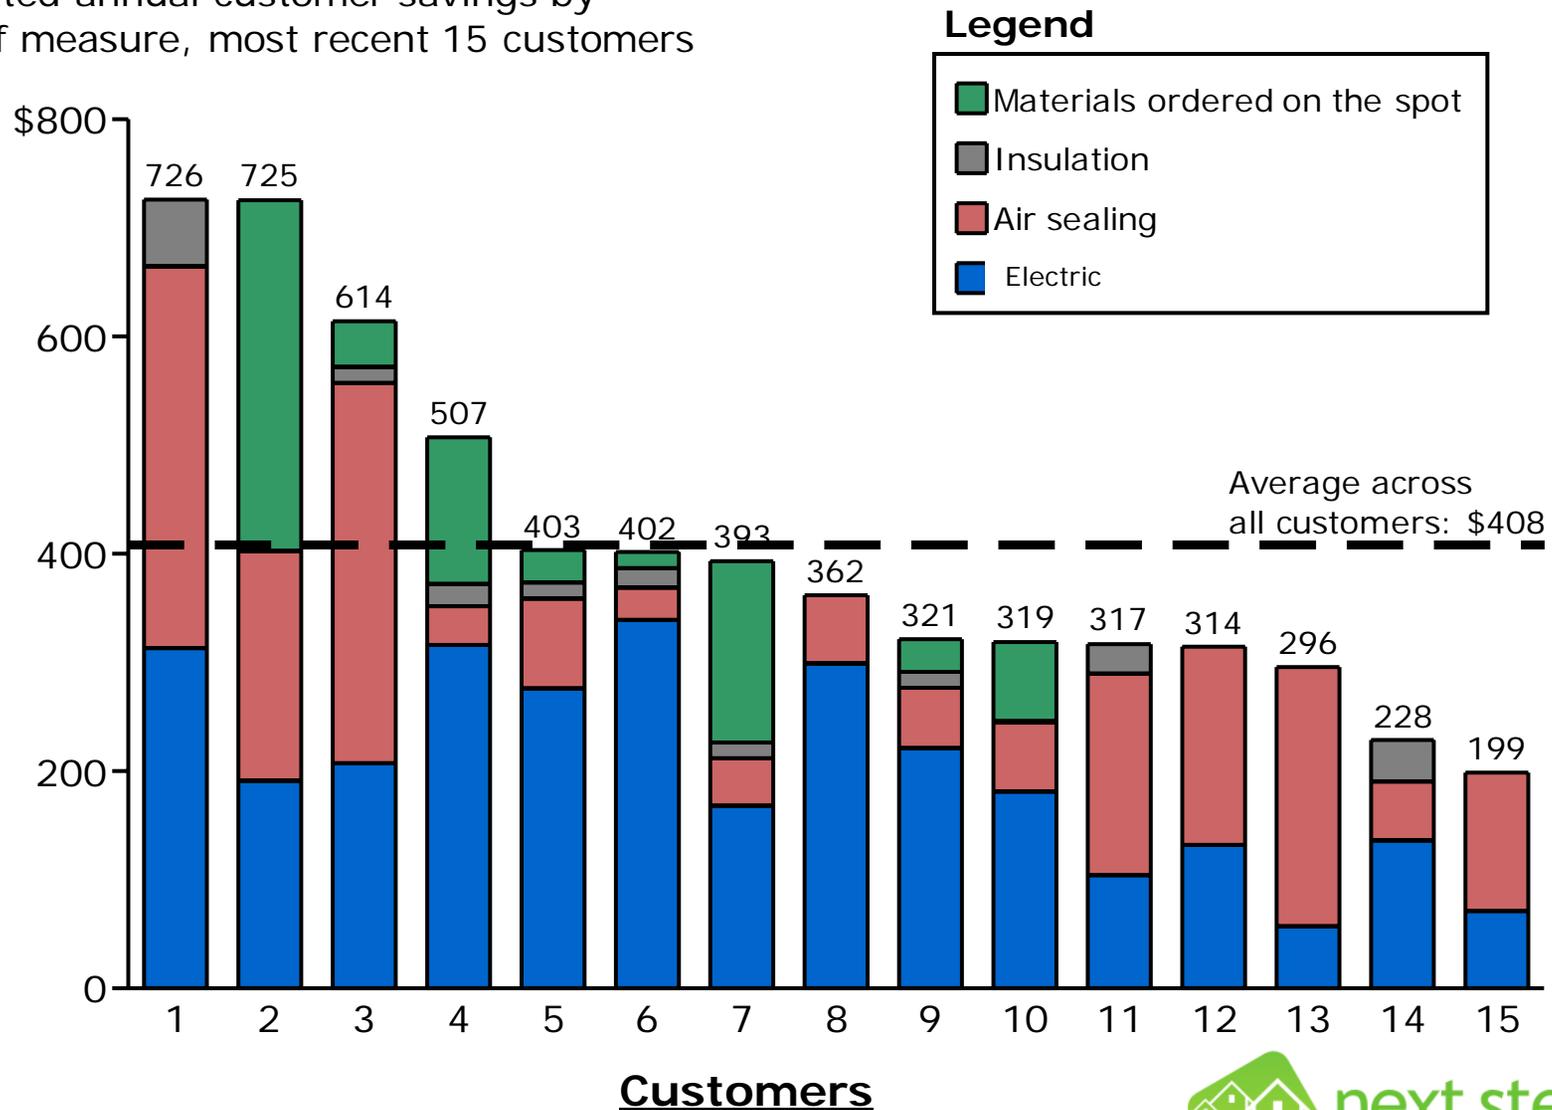

Tracking data will ensure that the EE service is always optimized

# Customer savings data: 15 most recent customers

Estimated annual customer savings by type of measure, most recent 15 customers

Estimates are based on 2009 Dept of Energy estimates for fuel prices (e.g. \$2.22 per gallon for oil)

# Case Study: Wrapping Attic AC and replacing CFLs led to 28% savings

## Typical 3 bedroom home in Needham

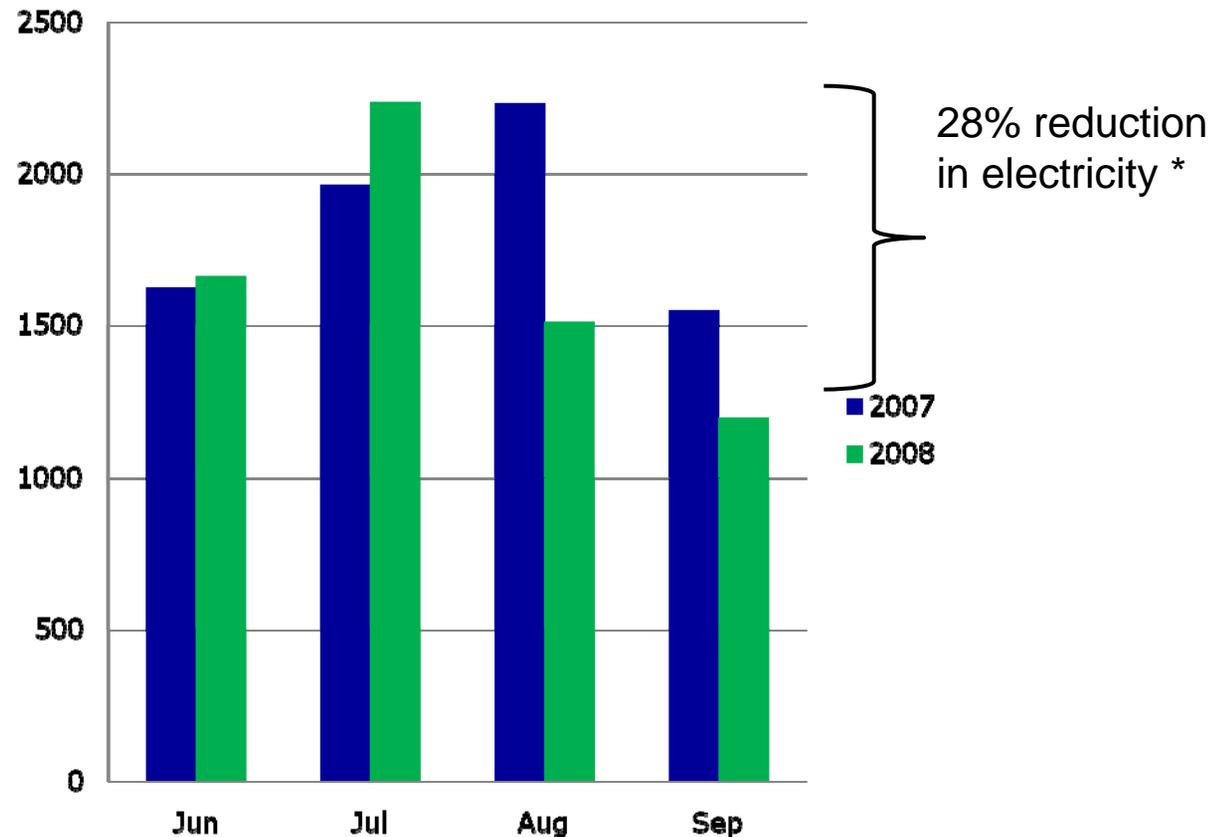

### • Diagnosis and changes

- Made standard changes within 3 hours on one visit
- Audit also identified AC in attic as uninsulated and costly

### • Results

- Client immediately started saving \$75 in electricity alone each month.
- They are on track to save even more in winter heat and light bills
- All the work was done by top notch certified auditors and contractors

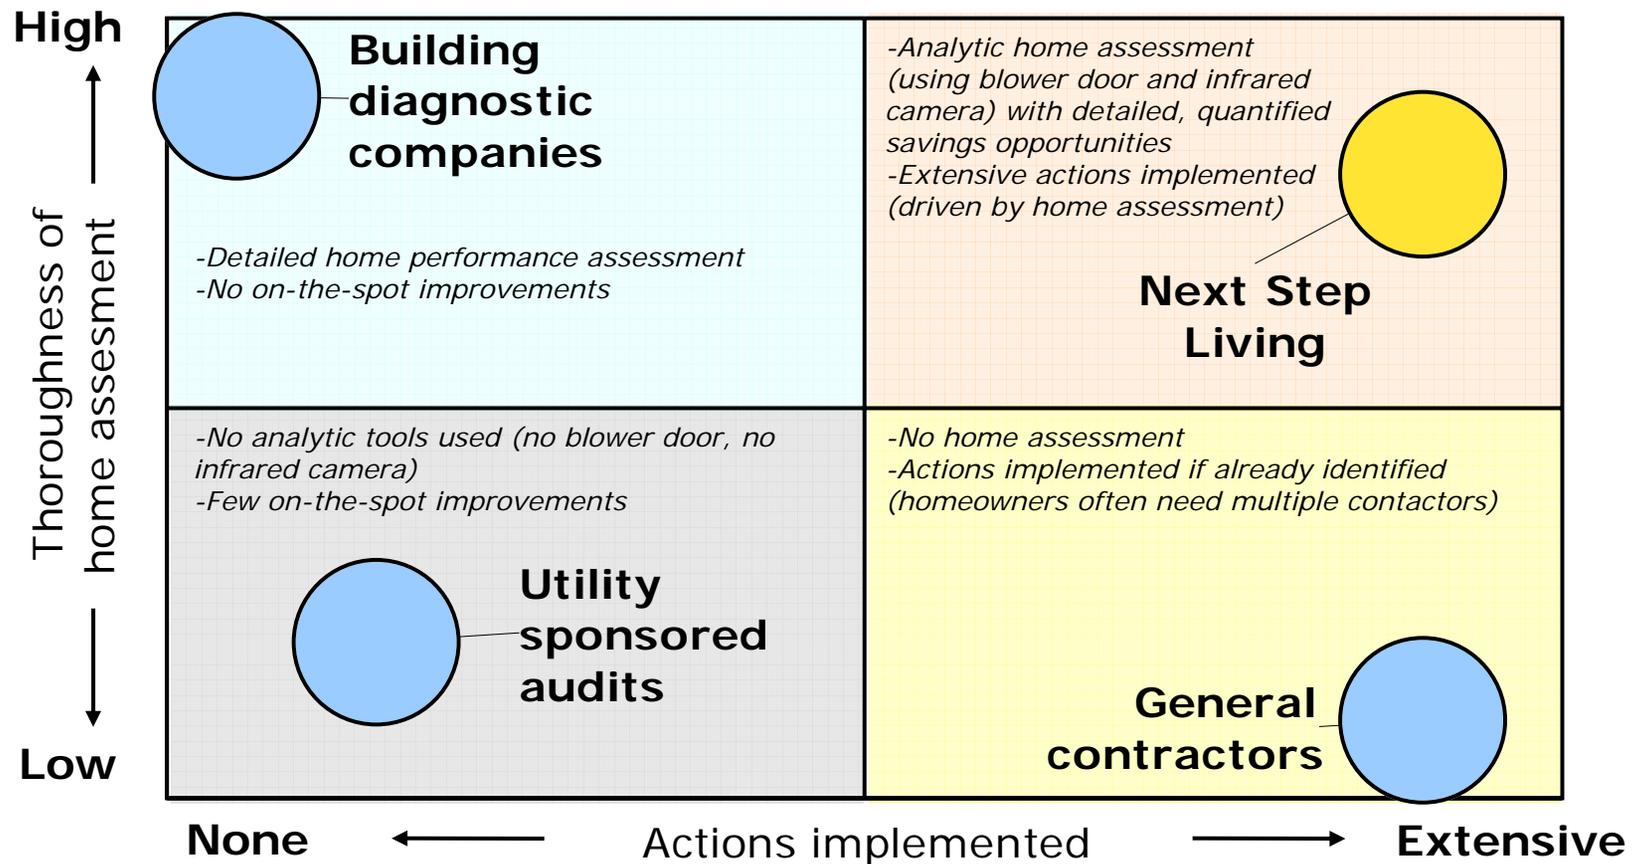

**KwH per Month**

**Other test homes are in the 15-33% savings range**

\*28% is over two months, average

Since we know where the opportunities are, it's important for EE companies to do on-the-spot implementations

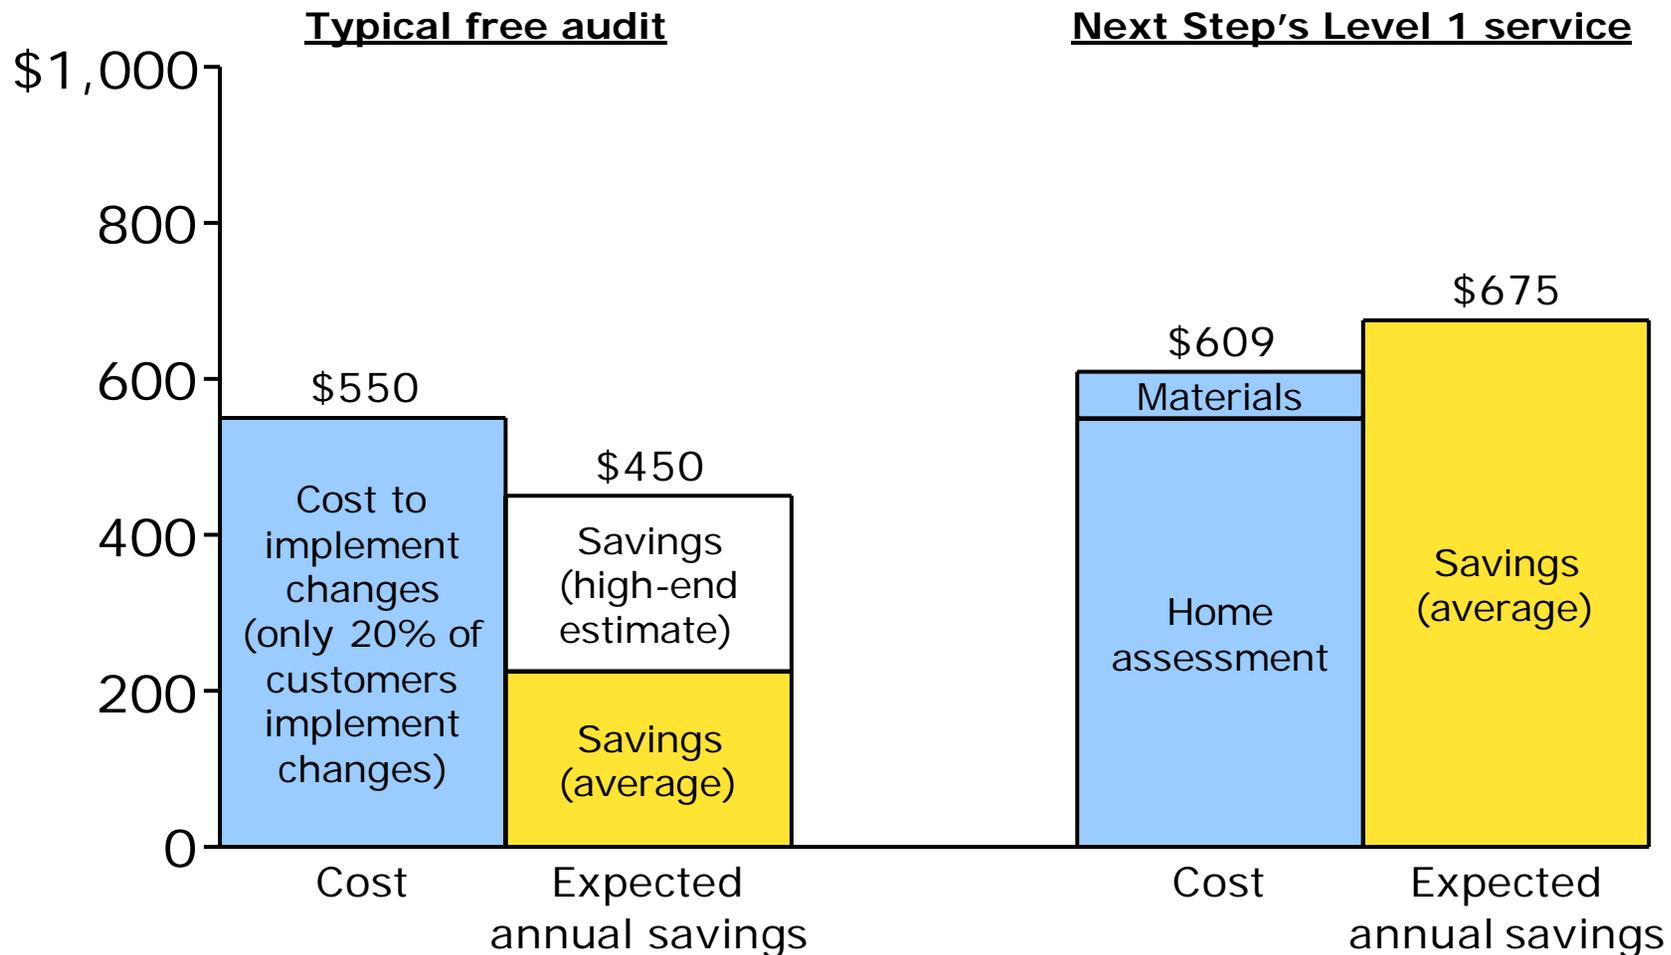

# Here's why it makes sense to use us!

- **We back our services with a 100% Satisfaction Guarantee**
  - If your energy usage doesn't **drop by at least 10%** for the 12 months following our service, **we'll come back and make sure you get there—Guaranteed**
- **We save you more for less**
  - The average annual return on our services ranges from 30% to 200% over a 5 year period
  - Studies show changes implemented from a free audit save homeowners 5-10% vs. **10-20%+ from our services. Our services also cost less** than buying all these services independently
- **We save you time and hassle**
  - One point of contact versus several
  - Fewer visits to your home
- **We quantify and make the options simple for your specific home**
- **We bring financing options and all rebates to your doorstep**
- You have an **ongoing advisor you can trust** when considering other projects because we know your home and **we advise against projects that don't make sense for you!**
- **Our field personnel are experienced and professional**

# Savings from NSL's Level 1 service are ~50% higher than savings from implementing changes recommended by typical free audits

\*Assuming annual energy expense of \$4500

Expected annual savings for free audit based on 5% savings rate (actual independent study) and 10% savings (from Residential Conservation Services Roundtable study; Free audit cost to implement includes time to search for good contractors (3 hours at \$50/hr), Labor cost to implement changes, and retail cost of materials  
Source: Buildings Energy Databook 2004; EnergyStar.gov; EERE.gov; aceee.org

# Our Step 1 service will identify the problem areas in your home, and we'll give you a custom report prioritizing the projects based on savings potential!

## Rigorous assessment includes infrared camera to find areas in your home where heat escapes

## Sample report output

**next step living**  
Home Energy Diagnostic Assessment  
Prepared for: John and Jane Smith

Summary of service:  
Energy Service Representative: Dave Portner  
Date of inspection: 10/15/11  
Service level: Level 1  
Measures taken: 1. Ductwork, 2. Insulation

Thank you for the opportunity to be available. The

**Key issues:**

- Airflow
- Ductwork
- Weather
- Insulation

Our Level 1 service your home, and a description of our

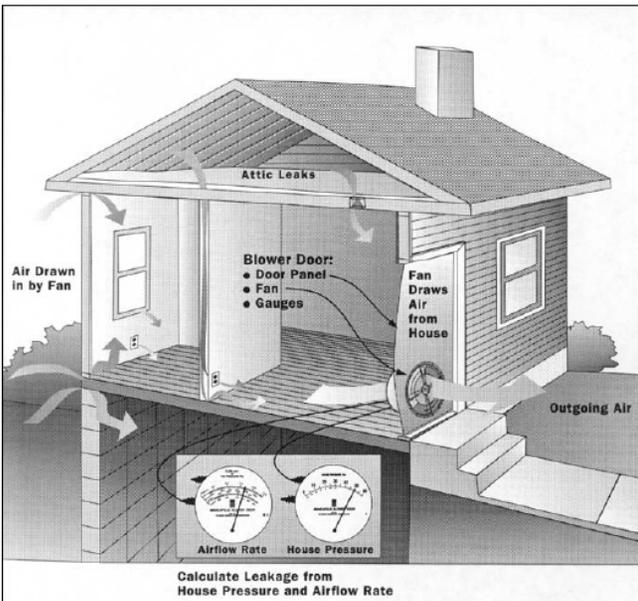

**Level 1 measures with annual savings**

Measure	Year(s)	Completed Annual Savings	Annual Cost (initial)	Rebate/Incentive	Comments	Estimated savings
Attic R-38 Insulation	2011	Not needed				\$0
Attic R-19 Insulation	2011	Not needed				\$0
Attic R-13 Insulation	2011	Not needed				\$0
Attic R-9 Insulation	2011	Not needed				\$0
Attic R-5 Insulation	2011	Not needed				\$0
Attic R-3 Insulation	2011	Not needed				\$0
Attic R-1 Insulation	2011	Not needed				\$0
Attic No Insulation	2011	Not needed				\$0
<b>TOTAL</b>						

Link to insulation or another subject allowing heat to escape. Below are our recommendations for insulating your home, with a calculated savings amount for each recommendation. In the future, you will be able to track this calculation.

**Insulation: Recommended measures**

Location	Area (ft <sup>2</sup> )	Current R-value	Recommended R-value	Statement of specific problem	Recommended action	Est. savings
Attic	1200	2	13	Attic insulation is missing through unsealed gaps.	Install R-13 insulation in the attic.	\$1400
Basement	100	0	10	Basement walls are uninsulated.	Install R-10 insulation on the basement walls.	\$40
Basement	200	1	10	Basement floor is uninsulated.	Install R-10 insulation on the basement floor.	\$80
Basement	200	0	10	Basement walls are uninsulated.	Install R-10 insulation on the basement walls.	\$80
Attic	1200	0	10	Attic insulation is missing through unsealed gaps.	Install R-10 insulation in the attic.	\$140
Attic	1200	0	13	Attic insulation is missing through unsealed gaps.	Install R-13 insulation in the attic.	\$100
Attic	1200	1	20	Attic insulation is missing through unsealed gaps.	Install R-20 insulation in the attic.	\$200

# Here's why it makes sense to use us!

- **We are obsessed with achieving the best results for our customers**
  - We back our services with a 100% Satisfaction Guarantee
    - If your energy usage doesn't drop by at least 10% for the 12 months following our service, we'll come back and make sure you get there—Guaranteed
  - We track your savings and share the results with you to make sure you are satisfied and that our services are working
    - The average annual return on our service ranges from 30% to 200% over a 5 year period—significantly higher than the average annual stock market return of 10%
- **We make it easy for you**
  - We save you time and hassle
    - One point of contact versus several
    - Fewer visits to your home
  - We quantify and make the options simple for your specific home
  - We bring financing options and all rebates to your doorstep
  - We are your ongoing advisor for considering other projects because we know your home and we advise against projects that don't make sense for you!
- **We guarantee the best-trained and most customer friendly workforce available**
  - Our field personnel are trained by the most experienced master auditors in the state and certified by us to meet best of industry standards
  - All employees receive intensive customer effectiveness training to ensure the best possible experience for you

# Top seven benefits for Employers

1. Ability to offer a new and unique benefit
2. In difficult times puts \$30-\$100 per month back in employees' wallets
3. Low ONE TIME cost of \$0-\$599 depending on subsidy level; average ~\$415 per employee
4. An offset to other benefits being cut and/ or premiums being increased
5. Significant PR value from press covering this issue and Next Step Living
6. Employer gets total dollars and greenhouse gases it saved (NSL compiles)
7. Nearly always an improvement on existing green programs
  - Easy for HR to administer; outsourced to NSL
  - Simple billing; no receipts to approve
  - Usually 10-100X more environmental benefit per dollar

# Employers can choose their funding level; financing options are flexible

Option	Cost to employer	Cost to Employee	Benefit to Employer	Benefit to Employee
<b>Full Subsidy</b>	<p><b>100% Subsidy:</b> \$599 + Materials</p> <p><b>Only \$187</b> for National Grid and Nstar gas customers in MA*</p> <p>Means employers can serve all employees for ~\$350 each if ~half are gas</p>	\$0	Maximizes adoption rate, greenhouse gas savings number, and amount saved to employees	Saves 100% of energy cost reduction each month
<b>Partial Subsidy</b>	<p><b>50-75% subsidy plus interest</b></p> <p>Employer subsidizes some of cost and creates a guaranteed “loan” for remainder through paycheck reduction</p>	Monthly loan payments likely \$10-15	<p>Strong adoption rate if promoted by employer;</p> <p>High employee satisfaction; moderate “green” factor</p>	<p>Immediate payback since cash flow positive from day one;</p> <p>Monthly savings of \$30-\$120 &gt; monthly loan payments of \$10-\$20</p>
<b>Loan to employee</b>	<p><b>0% subsidy plus interest</b></p> <p>Employer loans 100% of upfront cost to employee and earns interest from loan</p>	Monthly loan payments likely \$15-\$20	<p>Moderate adoption rate if promoted by employer</p> <p>Employer serves as a conduit for payment</p>	<p>Doesn't need to front the money for the audit</p> <p>Cash flow positive each month</p>

\*National Grid and NSTAR gas customers now qualify for 75% off the price of this service plus any additional work up to \$2,000. This means employers pay ~\$180 for each customer in this category (usually ~50-60% of employee base)
